SYA 5407: Advanced Quantitative Techniques  
(Generalized Linear Models) – Fall 2017  
3:35-4:50 pm; Monday & Wednesday; 519 Bellamy

Instructor: Dr. Michael McFarland, 619 Bellamy, mmcfarland@fsu.edu  
Office Hours: Wednesday, 10 am - 12 pm  
TA: TBD  
Office Hours: TBD

Course Description
This course introduces a broad class of models often referred to as generalized linear models (GLM). These models are an extension of the linear regression model you have already learned applied to non-normally distributed outcomes. We will discuss four major models within this class: models for categorical outcomes, ordered outcomes, count outcomes, and event outcomes. Upon successful completion of the course you will be able to: (a) read and evaluate published or presented research that uses GLM’s; (b) use Stata to reproduce existing GLM results from the textbook and create your own results from secondary data; and (c) translate the results into more useful summaries through tables and figures of predicted outcomes. You will be assessed with five assignments, five in-class quizzes, 15 surveys, and a take home final exam. Completion of SYA 5406 is required for admission to the course; other graduate-level multiple regression courses may fulfill this prerequisite with instructor’s approval. The course also requires skills that would be covered in a basic college algebra course.

Course Learning Objectives
1. Read and understand published research using GLM’s  
2. In a given situation, use appropriate criteria to determine if a GLM is appropriate, and if so which GLM should be used.  
3. Use Stata syntax files to generate regression results for each type of GLM covered.  
4. Interpret the output from Stata, both in terms of individual coefficients and in terms of measures of a model’s goodness of fit.  
5. Translate Stata’s output into more useful formats, e.g., tables/graphs of probabilities.  
6. Demonstrate good research skills through research logs.

Required Texts and Materials

Additional readings can be accessed online via FSU’s library.
Optional, but very useful:

Course Requirements

1. Five assignments will be required throughout the semester. The assignments include a computer-based analysis, your interpretation of the results, Stata syntax, and Stata output. Each assignment is worth 12 points, and together they account for 60 percent of your course grade. The assignments are due by midnight of the due date and should be submitted electronically through the course Blackboard site. It is your responsibility to confirm that you have successfully submitted the assignment. Late assignments will be penalized 1 point per day they are late (see grading rubric on next page), unless you have written beforehand with a valid excuse for the delay and a specific plan for when it will be submitted.

2. There will be five short in-class quizzes that assess your knowledge of the material and/or your ability to read published research using GLM’s. The five quizzes are each worth 3 points, and as a group they make up 15 percent of your grade. The grading criteria are described on the next page.

3. For each unit of the course (not each week), you will be responsible for reading two to three published research articles that demonstrate the statistical techniques relevant to the unit. I recommend you take notes that include the following: (a) a complete reference to the article; (b) a 1-2 sentence summary of the research topic and question; (c) the data set used in this paper, mentioning something about the population (e.g., adolescents born between 1958 and 1965); (d) the statistical modeling technique used in the paper that corresponds to the technique we cover in class; (e) the authors’ rationale for using this technique; and (f) an example of an interpretation of the results from the relevant statistical analyses. I may draw from these readings in lecture, in the surveys, in quizzes, and in the final exam.

4. You will complete 5-15 “surveys” throughout the semester (online and/or by hand). The surveys serve a variety of functions and are graded on a credit/no credit basis. The only time you will not receive credit for these surveys is if you do not complete them or it is obvious you put no thought into your responses. Sometimes these surveys are to determine if you have the skills needed to proceed in the course; other surveys are to generate feedback for use in lectures; other surveys may follow a more traditional skills quiz format. To receive credit for online surveys, complete the survey by the next day of class. These are worth 1 to 2 points each and together make up 15 percent of your course grade.

5. The course will have a take-home cumulative final exam. The final exam is due by midnight of Wednesday, December 13. The final is worth 10 points.

Grading Summary

<table>
<thead>
<tr>
<th>Assignment Type</th>
<th>Points</th>
<th>Grade</th>
</tr>
</thead>
<tbody>
<tr>
<td>(5) Assignments @ 12</td>
<td>60</td>
<td>A</td>
</tr>
<tr>
<td>(5) In-class quizzes @ 3</td>
<td>15</td>
<td>B</td>
</tr>
<tr>
<td>(5-15) Surveys @ 1 to 2 each</td>
<td>15</td>
<td>C</td>
</tr>
<tr>
<td>(1) Final Exam @ 10</td>
<td>10</td>
<td>D</td>
</tr>
<tr>
<td>TOTAL</td>
<td>100</td>
<td>F</td>
</tr>
</tbody>
</table>

A 90 – 100% of total points
B 80 – 89%
C 70 – 79%
D 60 – 69%
F below
I also assign pluses and minuses according to standard FSU guidelines. For grades A through D, the bottom 3 points in each grade range will receive a “-” (e.g., 80 to 82 = B-). For a grade of B, C, or D, the top 3 points in each grade range will receive a “+” (e.g., 77 to 79 = C+).

**Assignments**
- 12 pts – no errors or, at most, very minor mistakes in math or in wording; great job
- 11 pts – no errors but did not fully address what one of the questions was asking; or a single error in terms of interpretation or model/test execution; a good job overall
- 10 pts – two major errors in execution or interpretation, or incomplete answers; shows a good level of effort but inadequate attention to or knowledge of some details
- 9 pts – more than two major errors in execution or interpretation; suggests inadequate effort or serious confusion about the methods featured in the assignment
- 0 pts – if you copy another student’s syntax or report, you will receive no credit
  (1 pt deduction for late assignments per day they are late without prior authorization.)

**Quizzes**
- 3 pts – no errors or, at most, very minor mistakes in math or in wording
- 2 pts – one or two questions missed; you get the general idea, but not all the details
- 1 pt – half or more of the questions are missed; indicates large deficit in understanding
- 0 pts – the only way to get no credit for a quiz is in the case of an unexcused absence

**Surveys**
Surveys are graded on credit/no-credit basis, with credit given for on-time completion.

**Final Exam**
There are 10 questions on the final exam. Each question is worth 1 point.

**Computer Assignments**

**Data Sets**
The core of this course entails completion of five computer assignments: the first assignment is intended to get you up to speed using Stata to generate statistical output and to use Long and Freese’s customized post-estimation commands for GLM’s. The other assignments cover four major types of GLMs—logit/probit, ordered probit, Poisson/NBR, and event history analysis.

You’ll submit three separate documents for each assignment: a Stata syntax file used to generate the output; the output; and an answer sheet including answers to the assignment’s questions, any relevant tables/figures, and a summary of the data and measures you used in the assignment.

Throughout the class, I encourage you to work with your classmates when grappling with the text, when debugging syntax problems, or when attempting to reproduce the examples from lecture or either of our two textbooks. However, the work you complete on the assignment must be your own work, and each of you is responsible for analyzing a unique set of variables. Ideally the data set will be one with which you are currently working. The main requirement is that you analyze unique variables and that you estimate regression models that have significant results and require interpretation. Failure to analyze a unique topic or estimate models with significant findings will result in having to redo the assignment and/or receiving a lower grade (significant finding means b ≠ 0, p<.05).
Where to Use/Purchase Stata: The sociology graduate student computer lab has multiple copies of Stata (and its companion product, StatTransfer). Unfortunately, the computer lab is not large enough to accommodate students from other programs. If you are not a sociology graduate student, you need to buy your own copy (I recommend purchasing StatTransfer, too). In any case, if you would like to obtain a copy for you personal computer or laptop, you can purchase either a one-year license or a perpetual license for Intercooled Stata v.13 as a graduate student for $125 or $198, respectively, at http://www.stata.com/order/new/edu/gradplan.html. Stata/SE is also available with a one-year license and costs $235. Either version will work for this class. The main limitation of Intercooled Stata is this: “Intercooled Stata allows datasets with up to 2,047 variables. The limit of observations is based on the amount of RAM in your computer. Intercooled Stata allows string variables to contain a maximum of 80 characters.” For further information, consult http://www.stata.com/order/options-e.html#difference.

Problems with Stata: When you run into errors while running Stata, try these sources of help.
1. Consult the in-program Help menu and use the search function to examine the syntax rules for the type of command you are trying to run.
2. Ask a classmate for assistance with your error, many students have some experience using Stata and will be able to provide some assistance.
3. Ask your TA or me. If you want to ask us about an error, you must bring both your syntax file and the output file showing the error (if asking for help via email, send both as attachments). Without these files we will not be able to provide you with assistance.
4. Search the FAQs at Stata located at http://www.stata.com/support/faqs/.
5. Look through the Stata listserv archives at http://www.stata.com/statalist/archive/.

Guidelines on Submitting Assignments

Over the course of the semester I will be grading five computer assignments x 15-20 students, so I can expect around 100 assignments. In order to do the best possible grading job, I need your assignments to be submitted in a very standardized format. For example, when you submit components of the assignment to the course website, name your files using the convention: your last name, a dash, the assignment #, a dash, and the document type. And unless I inform you otherwise, each assignment should consist of the following, and in the order and format listed.

1. Your Stata syntax file used to generate the output. E.g., for the first assignment you would name this lastname-hw1-syntax.do, plugging in your last name at the front of the filename.
2. Your Stata output file used to answer the questions. E.g., name this lastname-hw1-output.txt.
3. Your answer document one, e.g., named lastname-hw1-answers.doc. This is a MS Word document to which you will add brief answers. You can download the blank answer document from Canvas along with the assignment instructions. If a question in the answer document asks for specific numbers from Stata, copy and paste those numbers directly from your Stata output log file to the answer document. It is VERY important that you keep these numbers in a fixed font and that the lines do not wrap (e.g., Courier, 9 or 10pt font). If your homework is difficult to grade due to formatting problems, I will request that you redo it. In the answer document you’ll also describe what you did generally, what data set you used, and how you constructed the measures used in the assignment and dealt with things like missing data.
You should submit all three files to the course Canvas site by midnight of the due date.

**Final Exam** – Though not a favorite form of assessment among most of the students I teach, I’ve come to firmly believe in the pedagogical value of a well-written, cumulative final exam.

**Other Information**

**Honor code:** This course will uphold the University Honor Code that is based on the premise that each student makes a commitment to avoid any violation of academic integrity (cheating) and refuses to tolerate violations (report cheating). The FSU Main Campus Student Handbook lists the Academic Honor Policy (http://registrar.fsu.edu/student_handbook/handbook_tal.pdf).

**Americans with Disabilities Act:** Students with disabilities needing academic accommodation should: (1) register with and provide documentation to the Student Disability Resource Center; and (2) bring a letter to the instructor indicating the need for accommodation and what type. For more information about services for FSU students with disabilities, contact:

- Student Disability Resource Center  (850) 644-9506 (voice)
- 08 Kellum Hall  (850) 644-8504 (TDD)
- Florida State University  SDRC@admin.fsu.edu
- Tallahassee, FL 32306-4400

**Class Attendance:** University policy requires that I take attendance during *every* class session. Students who have **more than 3 unexcused absences during the semester will be downgraded**; students who have **more than 5 unexcused absences during the semester will receive a failing grade for the course**.

Only the following absences are eligible to be excused:
1) Religious holidays as specified in FSU policy. *Students who miss class due to observance of religious holidays must speak with me in advance*;
2) Representing FSU at official functions, including intercollegiate club or varsity sports events;
3) Verified emergencies and/or medical illness. Medical illnesses are serious in nature and require continued treatment by medical professionals and/or surgical or other treatments. *Colds and fatigue do not qualify as medical illnesses. If you have a chronic illness that could affect your attendance, it is imperative that you alert me to this at the beginning of class.*

**Documentation is required for an absence to be excused.** Please provide a copy of the documentation to me and keep a copy for your own records. While I will not penalize you for excused absences, you remain responsible for all content missed, including assignments, knowledge, or skills that were covered in the missed class(es).

**Outline of Course Topics and Due Dates**

**Required reading:**  

**Part I.**  
Aug. 28, 30; Sept. 6, 11, 13

**Topics:** OLS Regression, Probability Distributions, ML Estimation, and Stata

**Reading:**  

**Articles:**  
Call, Sprecher, & Schwartz; Reynolds & Ross; Jackson
Quiz 1: Sept. 11 or Sept. 13
Assnmt 1: Due Wednesday, Sept. 20, by midnight

Part II. Sept. 18, 20, 25, 27; Oct. 2, 4
Topics: Binary Outcomes: Logit & Probit Models, Hyp. Testing, Goodness of Fit
Reading: [H] Chap. 3, [DH] Chap. 7; [L] Chap. 3-4
Articles: Longmore et al.; Schnittker, Freese, & Powell; Farkas & O’Rand
Quiz 2: Sept. 27 or Oct 2
Assnmt 2: Due Wednesday, Oct. 11, by midnight

Part III. Oct. 9, 11, 16, 18, 23
Topics: Ordinal Outcomes: Ordered Probit and Ordered Logit
Reading: [H] Chap. 4; [L] Chap. 5
Articles: Kelley-Moore et al.; Keene-Reid & Reynolds; Ellison & McFarland
Quiz 3: Oct. 18 or 23
Assnmt 3: Due Wednesday, Nov 1, by midnight

Part IV. Oct. 25, 30; Nov 1, 6, 8
Topics: Count Outcomes: Poisson and Negative Binomial Regression
Reading: [H] Chap. 6, [DH] Chap. 8; [L] Chap. 8
Articles: Rose; Carlson; Lee et al.
Quiz 4: Nov. 6 or 8
Assnmt 4: Due Wednesday, Nov. 15, by midnight

Part V. Nov. 13, 15, 20, 27
Topics: Analysis of Durations and Events: Discrete Time & Hazard Models
Reading: [H] Chap. 7, [DH] Chap. 9, [SW] Chap 9-14 (provided)
Articles: McDonough et al.; Sweeney; DeMaris; Upchurch et al.
Quiz 3: Nov. 20 or 27
Assnmt 5: Due Wednesday, Nov. 29, by midnight

Part VI. Nov. 29; Dec. 4, 6
Topics: Overview of Other Models: Multinomial Logit, Sample Selection, Etc.
Reading: [H] Chap. 5 + reread [H] Chap. 2, [DH] Chap. 4; [L] Chap. 6
Articles: Quesnel-Vallée and Morgan; Reynolds; Ross et al.
Final Exam: Due Wednesday, Dec. 13, by midnight

Note: Due dates for assignments are intended to give you the weekend if need be. I encourage you to finish and submit assignments before the deadline, to avoid delays that are beyond your control and to leave time for questions.
Additional Required Reading
